

Before ordering a pair of shoes or sandals you need to measure your foot, you will need:  
a sheet of paper  
a pencil  
a tape measure

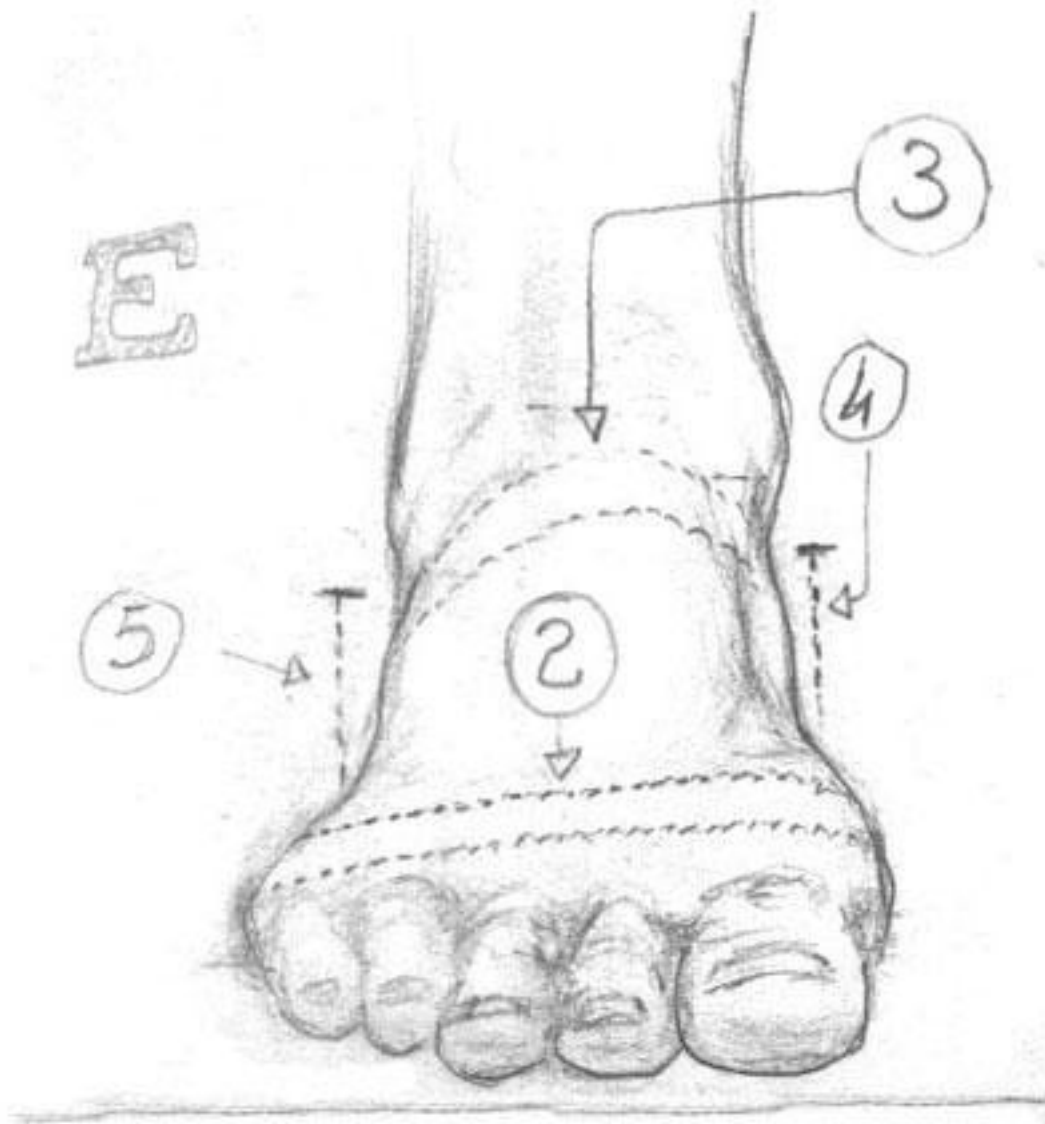

Lay your bare feet on a sheet of paper, draw the outline of it, making sure that the line corresponds as closely as possible to its real shape.

Now take the measurements of the fit (part of the foot under the fingers, point where the plant reaches the maximum width) marking on the sheet of paper the point where you measured.

Now measure the instep (part where the foot reaches its maximum height) and mark on the sheet the point where you measured.

At this point the measurements you have obtained we will need to define the number of the shoe or sandal, send us together with the drawing you made on the sheet.
